

HDPE CleanCut Cards

A Flexible, Cost-Effective Option
for Pouches or Trays

Early diagnostic cancer detection kit
for robotic delivery

Supply Chain Savings. Design Expertise. Speed to Market.

CleanCut Cards offer a cost-effective solution for securing and protecting medical devices within a sterile environment. Manufactured in ISO 7 & ISO 8 cleanrooms, CleanCut Cards offer strong, consistent, and customized packaging to accommodate the smallest component and extra-long catheters alike. Available in a variety of gauges and colors, CleanCut Cards:

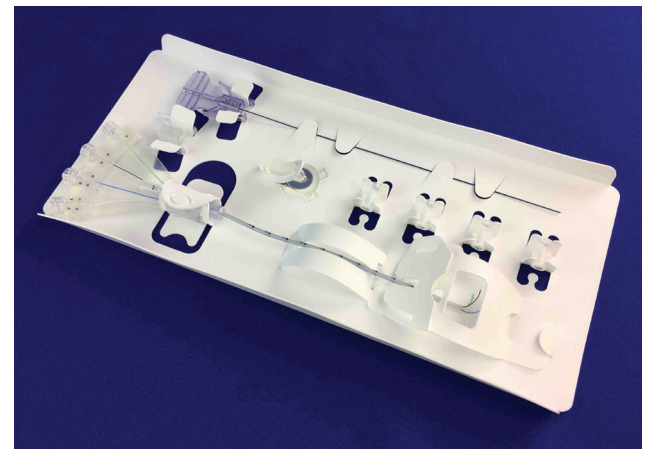

- ✓ **Cut design time: quick prototyping & design iterations are what make CleanCut Cards so versatile, especially compared to rigid packaging**
- ✓ **Decrease overall tooling cost**
- ✓ **Lower shipping cost since CleanCut Cards ship flat**

And if that's not enough, HDPE CleanCut Cards are also validated for biocompatibility per ISO 10993.

Unmatched design expertise, robust card configurations and the ability to get immediate feedback = higher confidence in passing testing the first time.
