

# Innovative and Efficient Catheter Packaging Solution

No clips mean significant cost savings for medical device manufacturers and a time-saving solution for medical professionals.

## Clipless Dispenser for Catheters and Guidewires

The award-winning Clipless Dispenser is a sleek, one-piece, symmetrical design that is optimized for retention of a device during shipping and storage with ease of use during surgical procedures.

Without clips, additional packaging material, weight, space and waste is reduced by 20-30% – resulting in significant cost savings.

There are no clips to fall off or puncture sterile pouches.

Tubing can be manufactured in various sizes and lengths, and can be flared, drilled or skived to retain a variety of luer or hubs.

The Clipless Dispenser, combined with a CleanCut Card, dispenses multiple catheters and guidewires and retains procedurally related components in one convenient system. Reduction in cost and prep time are realized.

Manufactured in ISO 7 and ISO 8 cleanrooms.
